Course

Contact me !

Jo Gervantamir

Computer Programming Student

I learn, design, code, debug and deploy .

object oriented Programming II

Level 2

Weight: 70.0

Course Code: CST8132

Working in the field of information technology as a programmer requires a firm understanding of Object- oriented Programming(OOP) concepts. Students explore object- oriented programming methodology using the Java programming language. Object oriented concepts, such as encapsulation, inheritance, abstraction and polymorphism are covered and reinforced with practical applications. Students explore the basics of data structures and algorithms as well as basic Graphical User Interface(GUI) programming .
